Product Recap

1Password Business

1Password Business Recap

1Password Business offers a comprehensive approach to password management tailored for professional environments, supporting secure access and collaboration.

1Password Business provides tools for businesses to manage credentials efficiently. Known for its reliability, it simplifies how teams store and share passwords securely. With seamless integration across platforms, it ensures that businesses maintain control over their data while enhancing productivity.

What are the standout features of 1Password Business?

- **Admin Console:** Offers centralized control over team permissions and settings.
- **Advanced Reporting:** Provides insights into security status and usage patterns.
- **Custom Roles and Permissions:** Tailors access control per user or team requirement.
- **Secure Sharing:** Facilitates encrypted sharing of passwords and notes among team members.
- **Integration Options:** Supports multiple platform integrations, increasing functionality.

Why should businesses consider using 1Password Business?

- **Enhanced Security:** Strong encryption ensures data is protected against breaches.
- **Efficiency Boost:** Saves time by streamlining password management tasks.
- **Cost-Effective:** Offers value by reducing the risks and costs associated with password mishaps.
- **User Adoption:** Intuitive for team members, reducing training time and support costs.
- **Scalability:** Easily adapts to the changing size and needs of businesses.

1Password Business finds applications in industries such as finance, healthcare, and technology. In finance, it helps firms safeguard sensitive information. Healthcare professionals use it to comply with privacy regulations. Tech firms benefit from its comprehensive access controls. Businesses in these sectors implement 1Password Business to streamline operations while maintaining robust security.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “There is nothing that frustrates me about 1Password Business; everything is really good with it, and it has increased the company's efficiency.”

Verified user

Project Manager at a consultancy with 51-200 employees

- ✓ “The overall experience with 1Password Business has been smooth and positive.”

Verified user

Cloud infrastructure at a tech vendor with 201-500 employees

- ✓ “1Password Business satisfies all my wants and needs and I feel very confident that it's providing me with good security.”

Fritz Madden

Senior Full-Stack Software Engineer at a tech services company with 51-200 employees

- ✓ “The best feature 1Password Business offers is the ability to use vaults to easily share access across different teams.”

Verified user

Software Engineer at a tech services company with 51-200 employees

- ✓ “1Password Business has positively impacted my organization by making it more secure, easier to share credentials with other people, and more reliable.”

Manager, Production Services at a tech services company with 51-200 employees

What users had to say about valuable features:

“One unique aspect of how I use 1Password Business is that it has a really nice Google integration, so I can use it with Google Chrome.

The best feature 1Password Business offers is that it is pretty easy to use. The aspect that stands out to me is the user interface.

1Password Business has positively impacted my organization. It has improved security and helped by providing better passwords with the generated passwords..”

“The best feature of 1Password Business is that it helps you keep track of multiple passwords used for various different purposes and allows you to make those passwords as secure and complex as possible. You can keep the length of the password long and add as much complexity as you want without having to memorize passwords for a bunch of different systems. It prevents you from using a password in more than one place, so all your passwords are unique. It notifies you if you've used a password somewhere else before.

“1Password Business has very easy-to-use password generation tools. You have lots of options in terms of how you'd like to construct the password, whether it's just a bunch of random letters, numbers, and symbols, or you can create phrases or hyphenated words. It's great for generating passwords for you. 1Password Business has a fantastic auto-generation feature so that you don't have to come up with your own..”

Fritz Madden

Senior Full-Stack Software Engineer at a tech services company with 51-200 employees

“1Password Business is a super product that we enjoy using.

“The best features 1Password Business offers are the ease of use and how simple it is to set up and get people onboarded.

“What makes the onboarding process easy with 1Password Business is that everything happens within 15 minutes or so. It is fast and easy.

“1Password Business has positively impacted my organization by reducing some of our security risks..”

AlexAlex9

“The best features 1Password Business offers are the developer tools, as they mean that if you have SSH set up on your GitHub account, you don't have to type in your password every time you commit and push something.

“1Password Business has positively impacted my organization by making it more secure, easier to share credentials with other people, and more reliable.

“If we were to forget our password, the owner of the enterprise can reset it and then log us back in. Using a password manager in general is more secure, especially when it's a trusted one by the entire team, and the reliability is evident because it's straightforward to log in knowing that your credentials will be there anytime you do log in. The developer tools make my daily workflow easier and more secure because they integrate with the fingerprint built in for MacBook, making it quick and simple whenever I have to log into something..”

“1Password Business is used across the company to manage access to several different resources, enabling multiple people who need access to the same resource to share that vault without having to add the same person or create an account for every individual.

“The best feature 1Password Business offers is the ability to use vaults to easily share access across different teams. Shared vaults enable smooth sharing throughout our organization.

“Sharing is a main highlight, and it can accelerate our processes as well.

“1Password Business positively impacts our organization by helping us maintain a better security posture and keeping everything in one location, making it easier to avoid leaks or manage credential changes across the board.

“Since we started using 1Password Business, it has saved considerable time. Previously, we had to contact several different people to determine the most current credentials, but now the vaults remain up to date all the time, eliminating the need to search for current credentials..”

“1Password Business is available for everyone in our team, and we also use the browser extension. Whenever we go to a CMS back end, it automatically fills in the user ID and the password. It works well in Chrome, Safari, Edge, and Firefox, and it automatically fills in the login and form securely. The data is end-to-end encrypted, so you don't have to worry about it. It also gives you a password generation feature, which helps me in using that password generator for sharing files in Dropbox for external teams.

“We have vaults in 1Password Business, and we have different vault folders where we have separate buckets where we fill items that we do internally, items that are shared, items that are online tools, items that are specific to a specific client, and some of the shared subscriptions that we use like Marker.io and other platforms that we have. This allows all other things to be specific in a bucket where we can go in and see what we need so that we don't have to go into each and everything to see what we need.

“Passwords in 1Password Business don't allow you to create a weak password, and it helps you with secure sharing. It also provides cross-platform support, and you can also set up two-factor authentication.

“Because we have teams working externally all over the world where teams are located in India, Armenia, and different areas, 1Password Business helps us by providing a secure link where you can send data in a secure manner when we have to share confidential credentials with them. Once the data has been restricted to certain users, it won't be available to other users. It also has a feature where the link will expire in a certain amount of time, and that's really helpful for the team to transfer the data more securely.

“1Password Business also helps you to save and store credit cards, including card number, expiry date, CVV, cardholder's name, and billing address, which is optional. If we have to purchase something that is part of the company, it also helps us to share the company credit card with colleagues who need to make purchases, and it's done in a really secure manner. The secure vault sharing is best for use as a shared vault, and we can add the credit card details to the vault and give specific people access. Only authorized users can see the card, you can control the permissions, and you can revoke the access at any time. Alternatively, you can also

give them a temporary secure link by selecting the credit card item, clicking share, and generating a secure link. It's really extremely safe, and that's really good.

“1Password Business does positively impact our organization because it helps us to have one consolidated place and one streamlined area of all the passwords that we need to keep accountable for..”

Other Solutions Considered

“I was using the Google Password Manager before, and we switched over to 1Password Business because the company said it was going to be our password manager since it was more secure, better for people to be on the same software, and they had more control in making sure people could get access to it..”

Verified user

Software Engineer at a tech services company with 51-200 employees

ROI

Real user quotes about their ROI:

“The ROI would largely be a soft cost that would be very difficult to quantify, but it definitely includes time saved, frustration saved, and improved security..”

Verified user

[Read full review](#) 

Senior Manager, Cloud Product Marketing at a tech vendor with 1,001-5,000 employees

“1Password Business saves 10 to 15 hours of workforce time every week, totaling almost 50 hours every month. Dedicated users are no longer required to rotate passwords, share passwords with others, or notify stakeholders via email when passwords expire. The elimination of email-based credential sharing has significantly reduced time spent on these tasks, resulting in approximately 50 hours of time saved monthly..”

Use Case

“1Password Business is used for automated testing through the 1Password CLI. The primary application is utilizing 1Password Business in Playwright tests to enable login to our system, allowing our automated test suites to run in Jenkins..”

Verified user

Software Engineer at a tech services company with 51-200 employees

[Read full review](#) 

“The main use case that we have for 1Password Business is to store our websites and CMS back-end passwords because we have lots of projects and many CMS platforms. 1Password Business has one consolidated vault where our UX and development team can go in and access the passwords for each and every website that we are working on..”

Verified user

Project Manager at a consultancy with 51-200 employees

[Read full review](#) 

“I use 1Password Business for both work and personal family purposes. At work, I use 1Password Business to organize all my passwords for various applications I log into, as well as certain secrets that I need to keep, such as keys and other sensitive information. I also use it to store secret information that I don't want anybody to gain access to for my own purposes or for work..”

Fritz Madden

Senior Full-Stack Software Engineer at a tech services company with 51-200 employees

[Read full review](#) 

“1Password Business serves as my primary tool for keeping passwords synced between team members and tracking my own passwords for the various accounts I interact with on a daily basis.

“I manage my own accounts using 1Password Business, as it provides an excellent way to keep passwords updated and create new accounts and passwords very quickly in a secure manner that complies with each website's password requirements..”

Verified user

Senior Manager, Cloud Product Marketing at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“1Password Business serves as my main solution for sharing credentials with my team and storing passwords for staging.

“We maintain a vault specific for the team where we have access to our staging and test environments.

“Whenever a new team member is onboarded, we give them access to the vault so they have immediate access to all the credentials they need to log in..”

Verified user

Software Engineer at a tech services company with 51-200 employees

[Read full review](#) 

“1Password Business is used to save all service account credentials for team members, with the need to keep everything in one centralized location. Multiple locations are created for each team, such as one for the analytics team, where all passwords, EC2 key pairs, and other credentials are stored and shared with team members for their use.

“1Password Business is used to retrieve passwords, and when new passwords are created, the password browser integration auto-populates the credentials whenever connecting to the single sign-on environment, filling in both username and password from the vault.

AWS IAM access keys are currently stored in the password vault for a critical application where IAM roles cannot be used. IAM access keys are rotated regularly through a separate pipeline that generates new access key and secret key every 85 days. These are seamlessly updated to the 1Password Business vault, and the application team retrieves the new credentials from the vault..”

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“My experience with pricing, setup cost, and licensing is that the setup was very easy. However, I am not involved in the cost or licensing aspects, as I am simply a user of the tool..”

Senior Manager, Cloud Product Marketing at a tech vendor with 1,001-5,000 employees

“The setup is straightforward and takes ten minutes. We complete setup together with our clients on Microsoft Teams or Zoom. Certain configurations need to be set correctly to improve security. We provide training that addresses securing master passwords and then give our clients the keys to the kingdom. .”

Other Advice

“The method of how the business purchased 1Password Business is uncertain. My advice for others considering 1Password Business is to try it out and see if it works for your organization, as it works well for us. I would rate this product a 10 out of 10..”

Verified user

Software Engineer at a tech services company with 51-200 employees

[Read full review](#) 

“My advice to others looking into using 1Password Business is that the documentation is pretty bad, but once you figure it out, it's a good tool. I would rate this product a nine out of ten..”

Verified user

Software Engineer at a tech services company with 51-200 employees

“I would not add anything else about the features. On a scale of one to ten, I would rate 1Password Business an eight. I chose eight out of ten because it felt right. Generally speaking, 1Password Business does most things really well, but it is not perfect. The advice I would give to others looking into using 1Password Business is to make their questions count. My overall rating for 1Password Business is eight out of ten..”

AlexAlex9

Lead AI at OnSurvey

[Read full review](#) 

“There is nothing that frustrates me about 1Password Business. Everything is really good with it. I really love enjoying using it. 1Password Business does save our team time because without it, I don't know how the team would have stored and saved that data. If writing them in the notes or any Word document and sharing that, it wouldn't be a good viable practice and would be a data breach. Everyone in the company uses the strong password guidelines. This has really helped them with time spent on resetting passwords for logging in or tracking the password, where did they store the data and everything. It has increased the company's efficiency. My overall rating for 1Password Business is 8..”

Verified user

Project Manager at a consultancy with 51-200 employees

[Read full review](#) 

“1Password Business is deployed in a hybrid cloud environment using Amazon Web Services (AWS) as the cloud provider alongside public cloud and private cloud environments with some SaaS products.

“An identity provider, Okta, has been integrated with 1Password Business, eliminating user onboarding challenges and providing seamless integration with Okta single sign-on.

“Groups and roles are utilized to grant access to specific team members. Audit features are not currently in use. Integration exists with the AWS environment and single sign-on, but not with other services beyond these. Password rotation is partially automated, with some rotations completed manually.

“The overall experience with 1Password Business has been smooth and positive. The review rating for this solution is 9 out of 10..”

About PeerSpot

PeerSpot is the leading review site for software running on AWS and other platforms. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
