Product Recap

CloudCheckr

CloudCheckr Recap

CloudCheckr CMx High Security is a cloud management platform that provides complete visibility into cost and security issues. The primary use cases are day-to-day operations, cloud management, identifying open vulnerabilities and issues from a security perspective, and cost management and optimization.

The solution is praised for its stability, simplicity, ease of use, scalability, excellent technical support, and granular reporting. CloudCheckr CMx High Security provides priority-level data on security issues and vulnerabilities, making it easy to identify critical issues that need immediate attention.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

✔ "The recommendation section is pretty helpful."

Peter Ramnath

Associate Director, ITSM & Onboarding at a computer software company with 201-500 employees

✔ "The most valuable feature of CloudCheckr CMx High Security is granular reporting. Additionally, the user interface is easy to use."

Nigel Mullings

Enterprise Cloud Architect at Peritem Consultants Ltd

✔ "The solution is scalable for our purposes."

Verified user

Assistant Vice President, Sr. Software Engineer at a financial services firm with 1,001-5,000 employees

✔ "The best feature I like about CloudCheckr CMx High Security is its simplicity. I love that it's not rocket science to use the solution. Even if you're not familiar with the cloud, you can easily figure out how to use CloudCheckr CMx High Security.You can use AWS, you can use Azure, and you can use GCP with the solution because the integration is quite simple. You can also use multi-cloud with it, and you could see the billing part. You'll have complete visibility into your cost which I love about the solution.I also love that data on any security issues and vulnerabilities are available on the go with CloudCheckr CMx High Security. You don't need to do anything different. Just run the scan and you'll have all these open findings in the tool, in terms of the priority level, so if it's critical, it will tell you, "It's critical," and you need to fix it right away."

Shrikant Pareek
Associate Director at Searce Inc

✔ "The solution is mostly stable."

Parag Baweja
Product/Solutions Sr. Manager at a tech services company with 10,001+ employees

✔ "The initial setup is straightforward."

Verified user
Service Delivery Manager at a computer software company with 10,001+ employees

✔ "It will automatically suggest areas for optimization."

Nikita Baluja

Deputy Solution Specialist at a computer software company with 10,001+ employees

What users had to say about valuable features:

"The dashboards were useful for visualizing where the cost and consumption are allocated. The recommendation section is pretty helpful. It provides an analysis of where cost and consumption can be adjusted.."

"CloudChekr will send notifications about services that are in use but should be reviewed for potential cost-saving. It will automatically suggest areas for optimization.

"This solution is easy to use and manage.."

Nikita Baluja   Read full review ↗
Deputy Solution Specialist at a computer software company with 10,001+ employees

"One of the most useful aspects of the solution is to be able to get my monthly snapshot and get the monthly invoicing. I'm able to customize the invoicing, based on the requirements we have.

I can use this solution for doing site recommendations and other similar tasks.

CloudCheckr is filled with useful features, that help us learn and to deliver the best recommendations on the data we have.

The initial setup is straightforward.."

Other Solutions Considered

"Ingram Micro has its own Cloud Marketplace for our customers. We have our own billing methodology built into that. Our partners who are using Azure and AWS would use their tools, Azure Cost Management, out of the box. We are moving customers away from that. Now, Microsoft is moving that model to CSP partners as well. That's why I'm looking at the comparisons to see which is better.."

Nigel Mullings   Read full review ↗
Enterprise Cloud Architect at Peritem Consultants Ltd

"My company decided to use CloudCheckr CMx High Security rather than a different solution because it's the best in the segment. In terms of flexibility, particularly on AWS, it's a perfect tool, and you don't need to worry about it at all. The functionality you're getting out of CloudCheckr CMx High Security on AWS is on another level, and none of the other tools could provide that. You can check any competitor, but CloudCheckr CMx High Security on AWS provides a lot of value.."

Shrikant Pareek   Read full review ↗
Associate Director at Searce Inc

"I have worked in the cost-management tools from many cloud providers, such as Amazon AWS, Google Cloud Services, and Azure.

CloudCheckr CMx High Security has a lot more detail than the native cloud service cost-management tools. If you want an enterprise-grade solution, CloudCheckr CMx High Security would be a good fit. If you want something simple, out of the box, then you can use the cloud service's native tools.."

Use Case

"We had not been evaluating the spending for our group. So we used CloudCheckr to evaluate what we had running and how much it cost to turn off what we did not need.."

Assistant Vice President, Sr. Software Engineer at a financial services firm
with 1,001-5,000 employees

"We have used different cloud services when using CloudCheckr CMx High Security, such as Amazon AWS, Google Cloud Services, and Azure.

We are using CloudCheckr CMx High Security for cost management and optimization.."

Nigel Mullings   Read full review ↗

Enterprise Cloud Architect at Peritem Consultants Ltd

"We are a managed service provider, and we were looking for a product that could give us clarity in understanding the billing and security aspects of our customers' cloud. We have a lot of customers on cloud infrastructure, so we needed a tool that could help us identify the open vulnerabilities and issues from a security perspective for all the clouds. We needed a single dashboard where we could check what's going on and what's wrong in terms of the security and billing aspects, and CloudCheckr CMx High Security provides us with all of those.."

Shrikant Pareek   Read full review [↗]
Associate Director at Searce Inc

"We are a solution provider and we use this platform to provide services to our customers.

"Our clients use this to financially optimize their cloud platform. Based on their utilization it helps to decide whether their current platform needs to be optimized and what the ideal form is. It helps to determine whether they have the right tools, which can result in cost reduction.

" It also provides basic information on security and compliance.."

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

"We've found the initial setup to not be overly complex. It's pretty straightforward. We didn't face any issues or roadblocks.

We have an internal team that handles maintenance.."

Verified user

"We have a CloudCheckr team that does training every time we give it away to a new partner who is using Azure or AWS. We have an onboarding form and we will give a form to our reseller, our customer. They'll fill that form and come back to us and then they'll be set up by Ingram Micro Cloud Team.."

Nigel Mullings

Enterprise Cloud Architect at Peritem Consultants Ltd

Read full review ↗

"The initial setup was pretty straightforward. It was standard. I rate the ease of setup a seven out of ten. The deployment was very quick. We can have the tool up and running within a couple of hours. Adding clients or tenants to the tool takes 45 to 50 minutes as long as we have the developer access to the tenant to set up the configuration. A cloud architect and I deploy the solution.

We do not do any maintenance for the tool. It is a SaaS tool. It is hosted by the provider. However, the data is not stored by the tool. The tool reads data from different Azure tenants that we configure on it. The data isn't written anywhere. It's just read from the Microsoft tenant.."

Customer Service and Support

"We've dealt with technical support in the past. They're good. We're satisfied with the level of service we're provided. They seem to be knowledgeable and helpful. ."

Verified user
Service Delivery Manager at a computer software company with 10,001+ employees

Read full review ↗

"We have a team here at Ingram who have been aligned to CloudCheckr. This team has close ties with CloudCheckr. The support's really good. Every time we deploy it we get a demo from CloudCheckr. They show the partner each of the menus, how they work, what they're for, why you would use them and all of those kinds of things. It's really good.."

Nigel Mullings
Enterprise Cloud Architect at Peritem Consultants Ltd

Read full review ↗

"Initially, our experience with support was not that good. Eventually, there was a discussion with our account representative, and we got some additional support to help us through some of the issues we were having. It is easy to create and submit cases. It was also easy to get updates on cases. It's pretty simple.

The solution has an online portal that we can use to submit cases. However, the type of responses we got back, and the level of assistance from the support persons reviewing our cases were not what we needed. We needed a little bit more in-depth help, which the team couldn't provide. We had to go directly to our account representative to get the right response.."

Other Advice

"People wanting to use the solution must check the documentation and be prepared for a learning curve. Overall, I rate the solution an eight out of ten.."

Verified user
Assistant Vice President, Sr. Software Engineer at a financial services firm with 1,001-5,000 employees

"We have a team that does the administration for our company and depending on the size of the client's company there can be a large or small team.

I rate CloudCheckr CMx High Security a ten out of ten.."

Nigel Mullings
Enterprise Cloud Architect at Peritem Consultants Ltd

"My advice to someone considering this solution would be to do it fast and do it now. It's one of the leading players for cloud optimization. It's hard to find anything better.

I would rate it an eleven out of ten. It's a great product. ."

Nigel Mullings
Enterprise Cloud Architect at Peritem Consultants Ltd

"We are both a partner and an end-user.

I'm not sure which version of the solution we're using.

I'd recommend the solution. It's a good tool and pretty simple to use. It's a good tool to explore and do the cloud management stuff with.

I'd rate the solution eight out of ten.."

Parag Baweja
Product/Solutions Sr. Manager at a tech services company with 10,001+ employees

"We integrate this solution for our clients. I'm not sure if we have a specific business arrangement with the solution, however.

I would recommend the solution to other organizations. It's a good tool, for the most part. For billing and invoicing for class optimization, and tasks like that, it's quite useful.

Overall, I would rate the solution at a seven out of ten. I'd rate it higher, were it not for the performance issues we've experienced when dealing with bigger amounts of data.."

Verified user
Service Delivery Manager at a computer software company with 10,001+ employees

Read full review ↗

"I'm currently using CloudCheckr CMx High Security. I'm using the SaaS product and that's the latest version. It's deployed on the public cloud, particularly on AWS.

My company has different teams using the solution, and the number of users of CloudCheckr CMx High Security is around eighty, at the moment.

My advice to someone who wants to use CloudCheckr CMx High Security is that it would depend on the use case. If you are on AWS, you don't need to even think about it. Just go ahead with using the solution because there's no better tool in that segment than CloudCheckr CMx High Security.

For CloudCheckr CMx High Security on AWS, I'm rating it a ten out of ten. My use case for the solution was mostly on AWS plus GCB, but on Google Cloud, it doesn't give much value. On AWS, it's really good.

My company is a customer/partner of CloudCheckr CMx High Security.."

About PeerSpot

PeerSpot is the leading review site for software running on AWS and other platforms. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
