Product Recap

Fastly

Fastly Recap

Fastly helps the world's most popular digital businesses keep pace with their customer expectations by delivering fast, secure, and scalable online experiences. Businesses trust Fastly's edge cloud platform to accelerate the pace of technical innovation, mitigate evolving threats, and scale on demand.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“The product's initial setup phase is straightforward.”

Verified user

Senior Consultant CDN at a comms service provider with 10,001+ employees

“Compute@Edge features are valuable to me.”

Nick Wilsdon

CEO at Torque

“The product helps our organization to access sites located in different regions quickly.”

Shubham Chakraworty

Infrastructure Engineer at a tech vendor with 10,001+ employees

“Rate limiting is a good feature that protects from volumetric attacks.”

Archana Heeralal

Security Engineer at Amazon

- ✓ “Support is good; the product works as advertised. We have a Slack connection with them. So we can basically ask for help, live, engage, and ring when they respond. Very quickly.”

Verified user

Information Technology Consultant at a tech services company with 51-200 employees

- ✓ “Its initial setup process is straightforward.”

Dale Ellwood

IT Infrastructure Architect at GoSee Travel

- ✓ “Fastly uses configuration versioning, where you can deploy a new version in less than one minute.”

Etienne WEHRLE

CDN & Cybersecurity Engineer - Web performance & security at CDN Tech / Ecritel

What users had to say about valuable features:

“Compute@Edge features are valuable to me. The product allows us to overcome architecture on the origin. It enables us to run a pilot very quickly. It also allows us to do A/B testing at scale..”

Nick Wilsdon

CEO at Torque

[Read full review](#) 

“Its VCL is very powerful, and the fact that we can interface with a deployed pipeline for the configuration as code is really great. So we don't have to do things with their web interface. Everything can be done programmatically as opposed to by hand.

Fastly is very stable, reliable, and fast. And when Fastly does its technology upgrades, it does a good job..”

Verified user

Information Technology Consultant at a tech services company with 51-200 employees

[Read full review](#) 

“We are using Akamai, Cloudflare, and Fastly. In order to be a hybrid reseller, we want to be an agnostic vendor. We have all three in our portfolio, and they offer quite the same solutions, like edge security, security on the edge, and delivery acceleration of websites. There are also zero-trust solutions, like Cloudflare and Akamai. Fastly is not as much of a zero-trust solution. There is no such feature that is special. I am in this market, and I want to be an agnostic reseller, giving advice to my customers in their use cases..”

Verified user

Senior Consultant CDN at a comms service provider with 10,001+ employees

“Overall, it is a good product. If we make any changes in one version and it doesn't work or something goes wrong, we can revert to the old version. We will not lose our configuration. For every change, we will have a separate version. We can switch back to the older version if we add anything new that doesn't work.

The solution provides good WAF features. Rate limiting is a good feature that protects from volumetric attacks. The product is easy to use and easy to implement. It is quite a mature product..”

Archana Heeralal

Security Engineer at Amazon

- CDN configurations are managed using VCL (Varnish Language), and you can do exactly what you want, including modifying the VCL code directly or using the GUI. This is really powerful.
- The CDN performance is really good, and it is fast, all around the world.
- Fastly uses configuration versioning, where you can deploy a new version in less than one minute. This includes a new origin server, caching rules, etc., and you can also rollback in less than one minute.
- The self-service model contains everything, and there is no need to ask for operations to be performed by technical support.
- Fastly CLI is really usefull to modify configuration in a quick way, more user friendly than the API but enought powerful to do what you want, I really like this possibility to make bulk changes

Etienne WEHRLE

CDN & Cybersecurity Engineer - Web performance & security at CDN Tech
/ Ecritel

“It combines both the CDN side and the Signal Sciences next-generation WAF. Fastly has a WAF which they bought from Signal Sciences, and that's closely integrated with the CDN. We use both products: the Fastly CDN and the Signal Sciences WAF.

“The VCL language is a distinguishing feature, and unlike other CDNs, it's a programmatic language with which we can write all the rules and configurations. That's the best part. VCL is a programming language for managing the cache..”

Other Solutions Considered

“That's the only downside I see, and I have experience with Akamai and Fastly. We have also had Cloudflare in the past, but Fastly seems to be more modern compared to the other providers..”

Verified user

Staff Engineer at a retailer with 1,001-5,000 employees

[Read full review](#) 

“We also use Akamai and Cloudflare. We often run dual CDN. We have expertise across all CDN platforms, including CloudFront. We have to understand all the available CDNs. We have to work in lots of those environments, but we do really like the development Fastly has made in Compute@Edge and the stability and performance of their platform. The big advantages of Fastly are the level of support, Compute@Edge functionality, innovation, and cost..”

Nick Wilsdon

CEO at Torque

[Read full review](#) 

ROI

Real user quotes about their ROI:

“We have definitely seen a return on investment. The important thing is that we’re able to use the platform to meet marketing demand and requests from other teams around the business. We're already increasing the return on investment by using the platform more widely across the business to meet our goals..”

Nick Wilsdon

CEO at Torque

[Read full review](#) 

“In our company, we like Fastly technology, and at the same time, we want to be an agnostic solution provider for multi-service edge providers, which is the reason why we offer Akamai and Fastly. As I am involved in Fastly's technology, I can basically tell my customers to look at different solutions. I can recommend a tool, depending on your use case, and which one would be the best for you. If you want Cloudflare or Fastly, we help you integrate it. As a neutral vendor, I don't stick to just one product, and that is my advantage. Fastly's interest is to win every customer they talk to, so it goes very often directly to the customer because its reseller is selling more than one product and not just Fastly exclusively. I know a couple of customers who do direct business with Fastly, but that doesn't involve me..”

[Read full review](#) 

Use Case

“We're using it as the primary content delivery network for a large number of websites that we're responsible for, and we're using it in a configuration of an edge and a shield in front of our organization.

And we use it in our deployed pipeline. So everything is configuration, is code. We use their VCL technology quite extensively for the functionality of the Edge behavior..”

Verified user

Information Technology Consultant at a tech services company with 51-200 employees

[Read full review](#) 

“The main use case for Fastly is the primary use case of the CDN, the content delivery network, where our primary website caches all the static content in the nearest POPs, which they call Points of Presence. We use it for the web application firewall to control any malicious traffic.

“We utilize the real-time visibility and control over cached content. We monitor how much is cached and how much is offloaded to the servers. We do this extensively to understand what content can be cached versus what content should be dynamic, using the real-time stats..”

Verified user

Staff Engineer at a retailer with 1,001-5,000 employees

[Read full review](#) 

“I use the product mostly for its Compute@Edge capabilities. Fastly is a content delivery network with various functions inside CDN. It has a functionality around security. It also has a content delivery functionality, which is a more standard function within CDN. If you are accessing a website locally from Mumbai, and these servers are based in California, you get a more localized version of the content. Content delivery is something that all CDNs do.

As technology has improved, we're able to do far more than just serve content at the CDN level. We're able to manipulate the HTML requests, rewrite those requests, redirect them, and do forward rewrites. We can carry out a lot of functions, run scripts, and even store data. It is an area that Fastly is very active in..”

Nick Wilsdon

CEO at Torque

[Read full review](#) 

“I manage CDN configurations for my customers.

We use this solution to ensure availability and performance for all of the websites we manage.

We are able to accelerate websites all around the world while they are hosted in a single location.

We are a partner of Fastly and we resell Fastly CDN to our customers. We plan the right configuration for their needs after we learn about their business, and we advise them of which features would be good for them to use. Following this, we do the complete CDN configuration, new release, maintenance, etc..”

Etienne WEHRLE

CDN & Cybersecurity Engineer - Web performance & security at CDN Tech
/ Eritel

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial setup is easy. The end-to-end implementation is quite good. The solution is deployed on the cloud. Support for end-to-end implementation is pretty much good..”

Archana Heeralal

Security Engineer at Amazon

[Read full review](#) 

“It was absolutely easy, and I would rate it between eight and nine because it was seamless for our use case. Some other companies might have a more complex setup, but for ours, it was easy..”

Verified user

Staff Engineer at a retailer with 1,001-5,000 employees

[Read full review](#) 

“The solution's initial setup process is straightforward. It takes half an hour to complete. It doesn't require any code for image optimization. We have to tick boxes for the necessary features. Also, it requires two executives for deployment and maintenance..”

Dale Ellwood

[Read full review](#) 

IT Infrastructure Architect at GoSee Travel

“The product's initial setup phase is straightforward. I would say that the setup is more like using Fastly, which is an embedded local firewall application, which is something I don't look into because I don't want to have a SaaS solution. I want to have a dashboard and configure it. I don't want to run virtual machines or look after a network. I don't want to install anything on AWS or anywhere. I haven't used WAF from Fastly so far because it is one of the two hundred WAFs out there. AWS has its own WAF, and it may not be as sophisticated as Fastly. If you need any integration in Fastly, it is probably good if you use one of the products, like Adobe Experience Manager, or if you are a customer of Adobe. You can also be a user of Magento, which is an Adobe product and has Fastly built-in. Fastly tool is part of some products. The customer already gets part of Fastly as it is built into those applications. It is wise for customers to use Fastly within their products and then additionally buy some extra features from Fastly that aren't standard within the product. Fastly is a company that is aiming for a lot of very big customers. Fastly was a supplier for TikTok, but they are not anymore as it is a very competitive market, and it lost the contract..”

Verified user

[Read full review](#) 

Senior Consultant CDN at a comms service provider with 10,001+ employees

“The GUI is easy enough if you're a small company; the initial setup would be fine. It took us a little while to get our deploy pipeline the way we wanted it to be automatic so that individuals don't have to do the configuration. It comes along with our application deployment.

So, if we're small, it's fine. The GUI is adequate and intuitive enough, and then as you grow and expand and evolve, you obviously wanna go towards using their API to deliver your configuration changes.

In our case, we deployed both on the prem version as well as the cloud. At one time, we did an on-prem version. We got rid of it because the value proposition wasn't there for the cost. We've now gone completely with their hosted infrastructure. Like, we don't do anything on-prem anymore.

We were like, we were very few companies that did the on-prem. But it was last year; we got rid of it because it wasn't something we needed to continue with.

The deployment process was a while back. It was fine. Fastly was very good at what it did.

Deploying something like that is nontrivial because you gotta coordinate hardware installs and circuits when things like that. .”

Customer Service and Support

“Something really good about Fastly is the level of support that they offer, which is exceptional. They have active Slack channels and give you a lot of support from their team to onboard. I was very impressed with that..”

Nick Wilsdon

CEO at Torque

[Read full review](#) 

“Support is good; the product works as advertised. We have a Slack connection with them. So we can basically ask for help, live, engage, and ring when they respond. Very quickly.

From the acknowledgment point of view, sometimes it takes a little while to get it to the right place. But a lot of time, just for the nature of the types of things we're asking for, we generally don't ask for Trivial support.

So a lot of the times when we ask for something, it's not hitting tier one or tier two anyway because it's inappropriate for them. So, a lot of times, when we ask something, it ends up needing to be escalated regardless because it'll be of a significant technical nature.

So sometimes you take a little while to get to it. But it's not that it would be unexpected; I have to wait to get it sent to the proper owner.

Moreover, the responses and they answer their questions with good answers, and they don't, like, we don't get that typical BS right around where they just ask us stupid question questions that could make us wait.

They're gonna put that clear up in and ask relevant questions, and they're actually really good..”

Other Advice

“I rate Fastly an eight out of ten. I advise others to go for Cloudflare if their application is hosted on AWS. They should evaluate Akamai as well. They must decide which product to choose based on price and use cases..”

Shubham Chakraworty

Infrastructure Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

“Fastly acquired Signal Sciences. It is a good product, and it fulfills our requirements. Even if a feature is missing, we can request it, and Fastly will help us. Overall, I rate the tool an eight out of ten..”

Archana Heeralal

Security Engineer at Amazon

[Read full review](#) 

“Fastly is very open to running pilots and trials and is very engaged with working with our team to set up their platform. They're a very good consideration not only to run as your primary CDN but also as a dual CDN. They are very open to conversation around it. It obviously improves resiliency and redundancy in our CDN setup. The solution allows you to take advantage of the features that Fastly may have over other CDN vendors within the same architecture. Overall, I rate the product an eight out of ten..”

Nick Wilsdon
CEO at Torque

[Read full review](#) 

“I would recommend reading up on the core functionality of the product and then mapping that to your business use case. And, particularly, cache keys are things you wanna look at. Your cache keys are well thought out so that you don't have something too specific, and you also don't want something too general.

We've had that problem in the past where our cache keys aren't specific enough or are too general, so we go to clear cache, and we're clearing more things than we should.

Overall, I would rate the solution a nine out of ten because I like this product. .”

Verified user

Information Technology Consultant at a tech services company with 51-200 employees

[Read full review](#) 

“In terms of security features, Cloudflare came into the security game very late. Cloudflare has a WAF solution, which it sort of purchased, so it is not native to its

portfolio. It kind of becomes native now because they integrate it, and you can have the WAF deployed either locally in your network or upon points of presence with Fastly, which is a legit web application firewall.

It is a good solution. It is a very developer-focused tool. Fastly has an easy setup process. It is a solution that is based on Varnish. Varnish is a caching language. Fastly Varnish Configuration Language (VCL) is a programming language that has already been around since the 1980s. Varnish is very native to developers who run Apache servers, which is also the concept of Fastly. We are using the skills of developers who know the configuration of the web servers, and we accelerate traffic using this special programming language. Fastly competes against Varnish itself because it is not a company. Varnish is an open-source product.

The users should be very strong, especially in order to facilitate quickly; everyone should have a strong knowledge of Varnish Configuration Language, which is VCL. If they just need to locally use the solutions and if they don't need worldwide distribution, they can do it via Varnish without Fastly being only used if you are a big corporation and you need to compute in lots of regions, and you don't want to run all the compute by yourself. If you are a big company and you want to have a global footprint in computing, you can deploy your own servers everywhere, like Azure, AWS, or any computing platform, but then you would run into a lot of costs. Fastly offers a platform, but I don't know how many POPs. Fastly is offering to compute functionality on its platform based on how an oil company sells you oil.

Fastly has a big computing platform, and if it is able to run computing on edge, it can also run AI on the edge because AI is nothing but computing in order to accelerate algorithms on edge, which is where you connect to the internet. If your computer is in London, you probably get connected with a British telecom company, and your first connection out of your house or office is to some sort of server related to a British telecom company, and it is what is known as the edge. If your computer comes from AI, media, or video, you are basically close to the British Telecom network, and the experience will be faster as you won't be able to connect to anything in Zurich, Tokyo, or Moscow. You connect directly to your local provider. Bring computing to the edge so you can accelerate your experience, so it will accelerate AI, video, and anything else because it is closer to you. If you make a request in ChatGPT, the request goes to some server, and that is at the speed of

light. If you are connected to a server in Australia, that could take up to 200 milliseconds, which is, like, two-tenths of a second, and if you do that quite often and if the request goes, like, 20 to 30 times, you end up waiting maybe three to four seconds for the answer of your request. If the British telecom, it has gone half a second because it is closer.

I rate the tool an eight out of ten..”

About PeerSpot

PeerSpot is the leading review site for software running on AWS and other platforms. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
