Product Recap

Netlify Platform

Netlify Platform Recap

Netlify Platform is a modern cloud tool for building and deploying web applications, offering efficient workflows and integration with popular services.

Netlify Platform streamlines the deployment of web projects by automating builds and managing infrastructure seamlessly. It caters to developers looking to simplify complex tasks with ease, allowing for swift integrations and fostering a smooth development lifecycle. Users benefit from features that accelerate production timelines, support team collaboration, and enable hassle-free scaling.

What features enhance Netlify Platform?

- **Continuous Deployment:** Automatically deploy updates from your code repository for seamless integration.
- **Integrated CDN:** Deliver content quickly and efficiently with built-in content delivery networks.
- **Serverless Functions:** Build dynamic web applications with ease using serverless functions supported out-of-the-box.
- **Real-time Preview:** Collaborate better with instant previews that reflect changes in real-time.
- **Custom Domain Management:** Manage and configure custom domains directly through the platform.

What benefits and ROI can be expected from Netlify Platform?

- **Cost Efficiency:** Reduce infrastructure and operational costs significantly through effective automation.
- **Enhanced Productivity:** Streamlined processes free up developer time, enhancing productivity.
- **Scalability:** Easily scale applications to meet growing demands without hassle.
- **Improved Collaboration:** Foster better team collaboration with tools that support shared workflows and real-time feedback.

In e-commerce, Netlify Platform helps retailers integrate personalized features quickly, adapt to seasonal traffic spikes, and maintain high performance. For tech startups, the platform supports rapid iterations and developmental agility needed in competitive markets, making it an industry favorite.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “Netlify Platform has positively impacted my organization and personal projects by making it easy for me to deploy my personal portfolio website without doing all the DevOps and CI/CD pipeline myself.”

Kurmathi Reddy

Software Developer at a insurance company with 10,001+ employees

- ✓ “Netlify Platform was very feasible and we did not have to pay a very large sum of money to host our services.”

Divya Shetty

Technical Product Manager at Prentice-Hall Inc.

- ✓ “My main reason for preference over competitors like GitHub Pages and Vercel is its seamless integration with GitHub, where I can deploy directly from my development IDE using CLI commands, making it more efficient without having to manually link things.”

Kumar Sunny Suman

software engineer at Alghoire Technologies Pvt

- ✓ “I would definitely say that Netlify Platform really helped us save time in feature delivery as the deliverables were quick, feature delivery was fast, CI changes and deployments were very quick, and we could easily deploy and test our features and roll them out to our end users.”

Manuj Sankrit

Senior Engineer at a manufacturing company with 10,001+ employees

- ✓ “Netlify Platform has positively impacted both my organization and personal projects.”

Pranjalya Tiwari

Senior Machine Learning Engineer at a outsourcing company with 501-1,000 employees

- ✓ “Absolutely, my everything was saved, money was saved and time saved.”

Abdulmunafz Mct

Freelancer at Sri Krishna Arts and Science College

- ✓ “Netlify Platform has positively impacted our organization because we have not encountered any major issues with Netlify services.”

MuhammadAwais

Technical Project Manager at Anglebrackets.io

What users had to say about valuable features:

“The first option of Netlify Platform features is my favorite.

Both the speed and simplicity of that feature make it stand out for me.

Netlify Platform has positively impacted my organization by saving me so much time. I am currently using the upgraded plan, which my store requires for custom subdomains, and that has helped me to create new subdomains automatically without verifying them to my customers. That saved me so much time with Netlify Platform because if I didn't do that, I would have to manage each request manually. I think that has saved me so many days..”

Yassine Kadri

Software Engineer at Bi3wechri

[Read full review](#) 

“The best features Netlify Platform offers include the instant connect to GitHub directly; just run one command and it deploys the app.

The instant GitHub integration and one-command deployment save me time and make things easier.

Netlify Platform has positively impacted my organization by boosting productivity; we can instantly deploy and save time. Additionally, for collaboration, multiple developers can connect and collaborate with it..”

Gajanan Patil

Developer at a tech vendor with 10,001+ employees

[Read full review](#) 

“The best features Netlify Platform offers include very easy integration and CI/CD. Whenever I update anything, it is deployed automatically, and I appreciate those features significantly.

The easy integration and CI/CD features of Netlify Platform have made my workflow smoother since I integrated it with my GitHub, and it worked very well without needing anything else.

Netlify Platform helps me launch projects 90% faster mainly because of the deployment process and contribution capabilities.

Netlify Platform positively impacts my work by helping me launch projects faster and collaborate better, which is very useful when I am working on my personal projects..”

Verified user

Senior Software Engineer at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“The best features Netlify Platform offers include a seamless deployment experience, server functions, great performance, and CDN. I can easily view my deployments.

When I mention server functions, I mean Netlify Platform's serverless functions for back-end logic. They are helpful for lightweight back-end logic without managing any infrastructure. I do not need to have another server for it. For the previews, every PR gets its own deploy preview which is a huge advantage when working with clients or teams.

The impact of Netlify Platform on my organization is positive because it allows me to easily deploy front-end applications without involving another stage of deployment. I can deploy it directly from my GitHub without having any other structure. I just put environment variables into it and keep it live for months. I have my application in different environments for staging, development, and production, which helps me a lot.

Netlify Platform saved me around ten to fifteen hours of work setting it up. If I tried to host it on other platforms, such as a VPS and deploying on it or going into AWS and adding services, it would have taken much longer..”

Masab Bin Zia

Lead Full-Stack Engineer at Zenexgen

[Read full review](#) 

“I absolutely love the CI/CD features of Netlify Platform, which is the continuous integration and continuous deployment. Once I have linked a project deployment to my GitHub, any push I make to my GitHub causes the changes to reflect on the live URL.

I also love the fact that I am able to rename the URL after deploying. I can change the name of the URL to suit the project. It just feels like customizing my domain.

My current portfolio is also hosted on Netlify Platform. Anytime I have a new project or I complete a new project or I have something new to update on my portfolio, all I need to do is make a push to GitHub and it immediately gets updated with the new changes I made. Any recruiter that has my portfolio link immediately sees those changes. I do not have to go and start deploying again or start sending my new portfolio link to recruiters. The CI/CD features of Netlify Platform make it so that any recruiter that still has my portfolio with them can immediately see any changes I make. This makes my workflow easier. I was able to rename it to Grace-Ituen-portfolio, which feels like I customized it to suit my use case, instead of just sending random characters.

I like the fact that Netlify Platform also integrates with GitHub. Deployment is faster that way. I have connected with my GitHub and I can get access to every repo on my GitHub, select it, and quickly deploy. I noticed that there is a user metrics feature that was just added, but I have to upgrade to enable that, which I have not done yet. I feel like that would also be something cool to explore. I would be able to see how users interact with my site and get analytics on user interaction. However, I have not explored that yet because it is asking me to upgrade, which I have not done. Maybe I will explore that soon and provide feedback after exploring..”

Grace Itiung

Software Engineer at a financial services firm with 201-500 employees

[Read full review](#) 

“The major valuable feature that Netlify Platform offers is the developer experience, which is very smooth. I could straightforwardly work on my front-end application logic and deploy it without difficulty.

“Another major advantage is the edge functions that Netlify Platform provides. At that time I was using Deno, which was relatively new, and Netlify Platform provided edge functions for it, which helped me leverage the CDN capabilities. These two features are the major ones for me: the first is developer experience and ease of deployment, and the second is the serverless and edge functions, which helped me use the CDN capabilities.

“When I talk about developer experience with Netlify Platform, it is really very easy. I can write the logic or if I am shipping a feature, I can push it to a branch and get a live review for local testing. The front-end teams doing code reviews also benefit significantly. I could give it to the testing team and once that is complete, we could very efficiently upgrade it to production with the preview changes we developed for the feature.

“Regarding edge functions, they were very helpful for A/B testing. I could implement or roll out certain features for a specific number of users, and based on their analytics, I could use the A/B testing capabilities. The CDN also helped significantly, as CDN cache invalidations and related tasks are abstracted and taken care of behind the scenes.

“When we shipped our front-end application with Netlify Platform, the process was very smooth. Since features could be shipped without much hassle and without thinking about how the architectures would work or how the infrastructure would be laid down, this smooth process was beneficial. Netlify Platform's CDN is very helpful, and our client's website could reach multiple geographical locations, which definitely helped their business.

“I do not remember the actual metrics because it has been two years, but I would definitely say that Netlify Platform really helped us save time in feature delivery. The deliverables were quick, feature delivery was fast, CI changes and deployments were very quick, and we could easily deploy and test our features and roll them out to our end users. I do not have the numbers since I used it three years back, but I

would say that it really helped us with very efficient and faster feature deliveries..”

Manuj Sankrit

Senior Engineer at a manufacturing company with 10,001+ employees

Other Solutions Considered

“Previously, I only used GitHub deployment, but then I learned about Netlify Platform and its CI/CD capabilities with GitHub integration, which I found very useful..”

Verified user

Senior Software Engineer at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“I previously used Vercel before Netlify Platform; then later, one of my friends suggested I try Netlify Platform, so I tried it and it had a different overview and UI. I love all the things in Netlify Platform..”

Gajanan Patil

Developer at a tech vendor with 10,001+ employees

[Read full review](#) 

“Previously, I was using other solutions such as Vercel and platforms such as Surge, but Vercel was costing too much money. That is why I shifted to Netlify Platform, as it gives a generous free trial..”

Masab Bin Zia

Lead Full-Stack Engineer at Zenexgen

[Read full review](#) 

“Previously, since it was in my organization, it was the first time we used Netlify Platform. My personal choice has since switched, and my current choice is Vercel. If I get the requirement, I will definitely use Netlify Platform again, but since Vercel nowadays is very famous and provides many capabilities, I have been using it..”

Manuj Sankrit

Senior Engineer at a manufacturing company with 10,001+ employees

[Read full review](#) 

“Before choosing Netlify Platform, I did not evaluate any other option. However, I tried to use another platform after Netlify Platform. Netlify Platform was my first go-to deployment platform when I was learning to code. I think sometime last year, I tried to use Vercel. I feel it was quite complicated for me. I have tried Vercel apart from Netlify Platform, but I prefer Netlify Platform. Netlify Platform is kind of easygoing and straightforward for me..”

Grace Itiung

Software Engineer at a financial services firm with 201-500 employees

[Read full review](#) 

“I have used two alternatives: GitHub Pages and Vercel.

For GitHub Pages, I can have a direct repository there. I can update the repository without needing to update anything else itself. It will directly go live. I don't need to make any changes and pull requests for this, and it is very easy for me. There are no limitations or any pricing model there, so I can just use it and have a back-end model as well. The same applies to Vercel. It has a very easy-to-view interface and all the things are easy. GitHub attachment is also easy, as is the custom domain deployment. They also have a small DNS and CDN, so it is much better for security purposes..”

Verified user

Unity Developer at a consultancy with 11-50 employees

ROI

Real user quotes about their ROI:

“I have not personally seen any return on investment from Netlify Platform yet other than just the learning that I was able to gain from the experience of using it..”

Sterling Lochmiller

Systems Engineer

[Read full review](#) 

“I have seen a return on investment since using Netlify Platform, as I just use it for free. This is a big win for me since I do not need to pay for anything..”

Mohamed Dridi

System Admin at Misfat

[Read full review](#) 

“I have seen a return on investment with Netlify Platform; it's money saved. Also, for a free user, for testing purposes, they can also deploy applications and save their time. Additionally, for the personal, pro, and enterprise plans, I think it's a good platform..”

Gajanan Patil

Developer at a tech vendor with 10,001+ employees

[Read full review](#) 

“I have seen a return on investment with Netlify Platform because I have saved money, particularly on deployment and buying servers, as it manages everything very well, making it very useful for me..”

Verified user

[Read full review](#) 

Senior Software Engineer at a outsourcing company with 1,001-5,000 employees

“I have seen a return on investment in terms of time; I mentioned previously that I save time, not money. I do not have metrics for saving money, but I have saved a lot of time deploying front-end applications..”

Masab Bin Zia

[Read full review](#) 

Lead Full-Stack Engineer at Zenexgen

“It completely depends on what sites I'm deploying. If I'm deploying any AI models, I will be maintaining them after one week and each time for training and other tasks. But if I'm deploying a static website, then I don't think it needs any maintenance if you have a small production, such as a CDN itself or something other than that on the websites..”

Use Case

“My main use case for Netlify Platform is for hobby purposes and for testing purposes. For example, I need to deploy some instant React applications, so I use it for that. I can instantly deploy with only one command, connect to GitHub, and directly using Netlify Platform, I deploy my React applications.

I do not have anything else to add about my main use case or how I use Netlify Platform..”

Gajanan Patil

Developer at a tech vendor with 10,001+ employees

[Read full review](#) 

“My main use case for Netlify Platform is to deploy my projects and to control GitHub deployment.

I am currently working on a project called Be A Richy, which is an e-commerce project similar to Shopify.

I feel Netlify Platform is great for my main use case..”

Yassine Kadri

Software Engineer at Bi3wechri

[Read full review](#) 

“My main use case for Netlify Platform is deploying my personal projects and utilizing the CI/CD capabilities.

A specific example of a project I deployed using Netlify Platform is an e-commerce app, which is a single-page application. I integrated it with Netlify using GitHub, enabling automatic deployment.

Day-to-day, I mainly use Netlify Platform for deployment and for generating a URL to share with my friends, who review the projects on social media..”

Verified user

Senior Software Engineer at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“I used Netlify Platform for deploying my front-end applications, primarily React applications that I built for various firms and clients. My main use case involved deployment of these applications.

“One of my biggest projects involved designing a news feed application for a client, and I deployed the front-end onto Netlify Platform. That project is still running and is earning my client a significant amount of revenue.

“I have deployed three to four projects with Netlify Platform, but this was one of the major ones because I faced many challenges. I worked through all of them and successfully deployed the application..”

Manuj Sankrit

Senior Engineer at a manufacturing company with 10,001+ employees

[Read full review](#) 

“The main use case for Netlify Platform is its very simple CI/CD integration with GitHub, automatic deployments on push, which includes a built-in CDN, and easy environment management. It shows the preview for a pull request, and for front-end focused teams, it has reduced the DevOps overhead.

My use case with Netlify Platform includes single-page applications, Next.js, hosting landing pages, and even small SaaS front ends.

A blogging website for my client is a specific project where I used Netlify Platform to deploy. It was hectic because the client wanted deployments again and again, so I integrated Netlify Platform with my GitHub. Whenever I push the code into my main branch or accept the PR from other branches to the main branch, it automatically deploys the application to Netlify Platform, and clients get updated at the moment..”

Masab Bin Zia

Lead Full-Stack Engineer at Zenexgen

[Read full review](#) 

“I typically use Netlify Platform to deploy my front-end applications because I am a software developer with a few experiences on the back end, but most of my experience is on the front end. I have used Netlify CMS once, sometime in 2022 for a blog. My typical use case is just for deployment.

I was really excited about my first project, which was an assignment at a bootcamp I attended. I was asked to build an e-commerce website where users can place orders with products displayed, and I was able to deploy it on Netlify Platform. It was really exciting for me because I was able to send the link to family and friends to show them what I was able to achieve. After that, I also used it for a Kanban board, something similar to Trello, which I also deployed on Netlify Platform. I have also deployed a to-do app, which I created on Netlify Platform and used for my own personal use. These are a few of the projects I have deployed on Netlify Platform that I was really excited about.

I am going to speak for the time I was working with an organization that used Netlify Platform extensively. For my current organization, they do not use Netlify Platform as much. However, when I was interning at TechPlus, they used Netlify Platform extensively. It was at that point that I had to integrate Netlify CMS to their blog site. At that time, I had to integrate Netlify CMS to their blog application. With that, it was easy for the team to update the blog post, and Netlify CMS gave us an interface where we could easily make updates to our blog application. We also deployed our applications on Netlify Platform during development, and with that, it was easy for the team members to see updates. The CI/CD feature was really cool. You could just make updates to the applications and let team members know that an update has been made, and every member of the team could see the update, especially the project managers who were always asking for updates on recent pushes. They could easily refresh the URL and see the updates in real-time..”

Unity Developer at a consultancy with 11-50 employees

“My experience with pricing, setup cost, and licensing for Netlify Platform is that I haven't had a chance to pay for its services. I basically use the free tier, and that's what I have been using so far. I don't think I have any improvements needed for Netlify Platform as it's solving my problems effectively. I don't think there's any new problem I need it to solve..”

Derek Pukadaro

[Read full review](#) 

Software and Hardware Engineer at Cybergenii

“I haven't paid anything for Netlify Platform pricing or any setup cost involved in it. It is completely free. I have used only free plans right now. For dealing with the license, I have used SSL certificates where I will be getting it from Cloudflare. So I'll be giving the DNS codes to Cloudflare. From that Cloudflare, you will be getting SSL certificates. That's how I get a license..”

Abdulmunafz Mct

Freelancer at Sri Krishna Arts and Science College

[Read full review](#) 

“My experience with pricing, setup cost, and licensing for Netlify Platform is that we do not use it for heavy projects, so it is mostly free. When we need to scale, we use the pay-as-you-go system. I cannot really assign a specific price to it. For licensing, we upload our own licenses so that we do not have to obtain something else when we already have another one that is working fine. Netlify Platform's built-in license is very sound, but it is better to have multiple options than one. The cost has been very minimal because we primarily use it for client projects..”

Kteams Michael

Web developer at King of CMS Consulting

Other Advice

“Using Netlify Platform would improve your developer experience and provide certain advantages, such as using the CDN without thinking about cache invalidations. I would recommend going for it. I would rate this review seven out of ten..”

Manuj Sankrit

Senior Engineer at a manufacturing company with 10,001+ employees

[Read full review](#) 

“It completely depends on what sites I'm deploying. If I'm deploying any AI models, I will be maintaining them after one week and each time for training and other tasks. But if I'm deploying a static website, then I don't think it needs any maintenance if you have a small production, such as a CDN itself or something other than that on the websites. I would rate my overall experience with Netlify Platform an eight out of ten..”

Verified user

Unity Developer at a consultancy with 11-50 employees

[Read full review](#) 

“My advice for others looking into using Netlify Platform is to use it, especially for front-end developers who need fast deployment for their applications. You can add a domain and connect to your GitHub, and it is directly connected to the CI/CD. Whenever you push your code, it gets the job done.

All is good with my experience using Netlify Platform, and I rate this product an eight out of ten..”

Masab Bin Zia

Lead Full-Stack Engineer at Zenexgen

[Read full review](#) 

“My advice for others looking into using Netlify Platform is simply this: you can just use Netlify Platform and check your experience. It was good.

I think Netlify Platform already has a lot of features. Other platforms don't have some features, but in Netlify Platform, a lot of features are already provided. So I love Netlify Platform.

I give this review an overall rating of ten out of ten..”

Gajanan Patil

Developer at a tech vendor with 10,001+ employees

[Read full review](#) 

“I recommend connecting Netlify Platform with GitHub for automatic deployment. If you want to set any environment variable, it has its own dashboard where you can update the settings.

My advice to others looking into using Netlify Platform is that it is very easy to use and easy to implement CI/CD.

I would rate this review an 8 out of 10..”

Verified user

Senior Software Engineer at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“Netlify Platform has done a great job. Netlify Platform has supported my journey and has been a great source of support for my journey because as a newbie, I used Netlify Platform for free while I was learning. I used it free to showcase my projects. I want to say thank you to Netlify Platform team for doing a great job so far.

In case of failed build, I would ask others to look at the logs carefully because that is where they will get tips to solve their problem. I would also tell them to go to the documentation site so they can fully explore everything that Netlify Platform has to offer. I would also ask them to manage the environment variable properly because many deployment issues happen when variables are missing.

One use case that stands out is what Netlify CMS helped with. At that time, the company was looking at employing someone that would be updating the blog through the code. However, integrating with Netlify CMS gave us an interface that allows just anybody, even someone that is not tech-savvy, to update the blog. Even the writers could update the blog using Netlify CMS. There was no point in employing a front-end intern to be updating blog posts through code or uploading blog posts from the backend.

I give Netlify Platform a rating of eight out of ten..”

About PeerSpot

PeerSpot is the leading review site for software running on AWS and other platforms. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
