Product Recap

Spryker Systems

Spryker Systems Recap

Spryker Systems offers a flexible and scalable commerce platform designed for businesses seeking tailored digital solutions. Its modular architecture and API-driven functionality support customized applications across complex business landscapes.

Spryker Systems empowers enterprises by providing a robust platform with features that cater to the dynamic demands of modern commerce. Engaging both B2B and B2C segments, it allows businesses to leverage its modular system for creating personalized experiences. With a focus on scalability, Spryker Systems supports diverse and multifaceted digital commerce strategies. The platform encourages innovation through its comprehensive set of commerce features, enabling businesses to build, scale, and customize their digital presence seamlessly.

What are the key features of Spryker Systems?

- **Modular Architecture:** Enables businesses to select and use only the necessary features.
- **API-First Approach:** Facilitates integration with third-party services and existing systems.
- **Headless Commerce:** Supports seamless front-end customizations for user experience.
- **Marketplace Capabilities:** Allows expansion of digital marketplaces with ease.
- **Global Scalability:** Provides tools and infrastructure necessary for international commerce expansion.

What benefits should users consider when reviewing Spryker Systems?

- **Customization:** High degree of flexibility allows tailor-made solutions.
- **Integration:** Easily connects with various existing platforms via API.
- **Scalability:** Grows along with business needs without constraints.
- **Cost Management:** Offers efficient pricing models for optimized budget use.

Spryker Systems is implemented across industries such as retail, manufacturing, and healthcare, providing sector-specific solutions. Its adaptability allows it to meet unique industry requirements, ensuring businesses can achieve their digital transformation goals efficiently.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “From an extensive point of view or for a large project point of view, Spryker Systems is the best platform right now.”

AnkurPorwal

Staff Engineer at a tech vendor with 10,001+ employees

- ✓ “If someone has a big product, then they can use Spryker Systems there, and if they do not want to lose customers' sessions or lose their customers, then Spryker Systems is a viable option.”

Rohit Kaushish

Senior Software Engineer at Tech Mahindra Limited

- ✓ “Over the last six months, I have found that Spryker Systems' composable commerce and integration capabilities have helped me because Spryker also has the capability with Docker.”

Verified user

Associate Staff Engineer at a tech vendor with 10,001+ employees

- ✔ “Spryker Systems has had a positive impact on my company because we were able to generate a significant revenue increase in our e-commerce area.”

Verified user

Head of IT at a tech vendor with 10,001+ employees

- ✔ “The platform's composability is valuable as it provides a variety of extensions to interface with other solutions.”

Iyas Hamadet

Technical Architect / Technical Officer at SQLI

What users had to say about valuable features:

“The platform's composability is valuable as it provides a variety of extensions to interface with other solutions.

Additionally, its API-first approach facilitates everything through the API, allowing for externalization or the use of preferred solutions within the same stack. The integration capabilities are particularly beneficial..”

Iyas Hamadet

Technical Architect / Technical Officer at SQLI

“The best features that Spryker Systems offers, in my opinion, are the modular system, the headless system, and the back office functionalities.

Spryker Systems has had a positive impact on my company because we were able to generate a significant revenue increase in our e-commerce area. That is not only due to Spryker Systems, but also because we placed a strong focus on e-commerce and developed a stable, global platform. Spryker Systems enabled us here..”

Head of IT at a tech vendor with 10,001+ employees

“In Spryker Systems, the most valuable features are that the front-end is a separate part from the back-end. If I am working on the back-end, it is totally different from the front-end. When I connect these, I have a third folder available. When connecting these, I have to use this third folder. The Docker system image container is perfect for load balancing. In Spryker Systems, there is an EAV structure, but creating attributes there is tricky. I can add a basket over the cart; for instance, if I want to purchase bundle items for one customer, then I can add multiple products. After that, I can create a second bundle item in the cart and proceed with that. I can negotiate price there, and this functionality is also provided by Spryker Systems itself.

“The price features are good in Spryker Systems. I can manage price according to customer groups or bases, which I think is valuable functionality..”

Rohit Kaushish

[Read full review](#) 

Senior Software Engineer at Tech Mahindra Limited

“The best features Spryker Systems offers, in my opinion, is that it is known as composable commerce. It contains numerous features and all the capabilities Spryker has. If you want to use it as a multiple system in a single place, that is the reason Spryker has much capability to achieve in the new AI era. If we want to use anything such as RabbitMQ or Docker, these are the capabilities Spryker has. I recommend Spryker for future clients as well.

Over the last six months, I have found that Spryker Systems' composable commerce and integration capabilities have helped me because Spryker also has the capability with Docker. Using Docker, I can easily install Spryker on my system and utilize Spryker's multiple services such as queue services with a single click. I really appreciate that capability.

Spryker Systems has positively impacted my organization as it is completely new to me. Right now, I am still expanding their features and exploring their capabilities. At an organizational level, I have found that multiple clients want a system that they can easily handle. Spryker is capable of doing it. At the organizational level, I have found many things that Spryker can easily achieve, and that is why Cognizant is ready to extend Spryker Systems' capabilities around their clients..”

“Spryker Systems' best feature is the publish and sync capability. When we are creating a Glue API, the front end, or the Yves side, this is a very good feature. All data is available in Redis and Elastic. You don't need to run, write, or execute a query for the database. All the data is present in Redis and Elastic, so the response time is very fast. This is the main significant feature in Spryker Systems.

“Spryker Systems offers several best features, including that it is headless. All containers are running separately, such as Zed, Yves, Glue, the back office, and the backend gateway. All containers have separate PHP, and all features run separately. Because of that, the performance is very good. A single instance is not executing on the server side. By default, Spryker Systems provides us with the setup for the AWS environment. It is a PaaS system. You simply go and use this very quickly, and no DevOps person is required. They set up everything, such as CI/CD and everything you need.

“Spryker Systems has positively impacted my organization because it is very trendy in Austria and Germany. The main scope is that every organization wants to increase its business. When we use Spryker Systems, we can say that we have increased our business..”

AnkurPorwal

Staff Engineer at a tech vendor with 10,001+ employees

Other Solutions Considered

“Before Spryker Systems, I was working on Magento in a service-based company that introduced this system. At that time, Magento had some issues, such as slowness. One of our clients was saying that Magento is too slow. That is why we went to Spryker Systems, and Spryker Systems has better features and functionality..”

AnkurPorwal

Staff Engineer at a tech vendor with 10,001+ employees

“I previously used Adobe Commerce solution for the e-commerce system before exploring Spryker Systems. I have not switched to Spryker; I am just exploring the next option for the e-commerce system. I am still using Adobe Commerce and exploring Spryker because sometimes clients want a system where they can easily integrate data. I see that Spryker also has much capability, which is why I think this is the right time to explore their capabilities as well..”

Verified user

Associate Staff Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

“Before choosing Spryker Systems, I explored Shopify and found it to be completely a SaaS-based system. BigCommerce and Shopify provide many capabilities, which is truly easy for clients who want a website that can open up quickly in a day. Most of the time, they go with Shopify and BigCommerce because of the capabilities they have in their SaaS system. In another way, Spryker Systems and Adobe Commerce do not have such capabilities. Adobe Commerce has a SaaS-based system, but it really works and it has much cost, so low-cost clients are unable to purchase those versions..”

ROI

Real user quotes about their ROI:

“I have not seen specific outcomes or metrics, but Spryker has many capabilities that reduce a lot of integration. I do not have any specific metrics to share regarding return on investment right now..”

Verified user

Associate Staff Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

Use Case

“Our primary use cases for Spryker are within a B2C marketplace setting. It enhances digital commerce operations and provides a composable solution for activating or disabling features as needed..”

Iyas Hamadet

Technical Architect / Technical Officer at SQLI

[Read full review](#) 

“My main use case for Spryker Systems is that we have an e-commerce solution in the company that focuses mainly on spare parts sales, but is not limited to that; we also have other options. A concrete example of how I use Spryker Systems in the spare parts sales area is that it serves as our e-commerce backend system..”

Verified user

Head of IT at a tech vendor with 10,001+ employees

[Read full review](#) 

“My main use case for Spryker Systems is primarily for e-commerce. I use it to build new cases in the system as my client requires, exploring the features and conducting proof-of-concept projects over the last six months on how clients work and their requirements.

I do not have anything else to add about my main use case or any other interesting projects I have worked on with Spryker Systems..”

Associate Staff Engineer at a tech vendor with 10,001+ employees

“My main use case for Spryker Systems is very broad. We are creating a store and developing the API for headless purposes. We custom-created over 70 APIs here. Additionally, this system has over 120 stores, and we provide the product data feed to that system. It is a Fortune 500 company, and the daily hits on the system are around eight to nine million, which we are processing. The best part is that we optimized the system to have an API response time within 500 milliseconds, where the structure of the response of the Glue API is approximately a thousand lines..”

AnkurPorwal

[Read full review](#) 

Staff Engineer at a tech vendor with 10,001+ employees

“I worked on Spryker Systems during my last project for Redington. They were selling B2B products on their site, which contained the custom checkout, custom cart page, and quote page that we generated. In Spryker Systems, we have Yves and Zed folders for the back-end, so creating modules requires knowledge of core PHP. The business logic works in layers; there are four layers in its architecture: business, business logic, front-end layer, and application layer where I had to work. Additionally, there is middleware through which I had to pass business logic to the front-end or vice versa to the back-end.

“I can confirm that Spryker Systems can be used as a multi-channel platform. In my projects, I used Spryker Systems as an e-commerce site. It contains B2B and B2C, and it is language-based. I was able to change the language in multi-stores and utilize it according to my requirements for Spryker Systems.

“If Spryker Systems could improve their code to reduce the layers, that would be beneficial. They are using the facade design pattern in coding; if they could use the factory or repository directly in the front-end or back-end, wherever the developer wants, that would be advantageous. This feature is what I would like to see added..”

Rohit Kaushish

Senior Software Engineer at Tech Mahindra Limited

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial setup was moderately challenging. It is well-documented. However, there are some cases where the documentation can be outdated, necessitating support. I would rate the experience as eight out of ten for ease of setup..”

Iyas Hamadet

[Read full review](#) 

Technical Architect / Technical Officer at Sqli

“To install Spryker Systems on a system, it is easy and not complicated, because Spryker Systems provides a Docker image. I can run two or three commands, and it will automatically install on the system; that part is not complicated at all..”

Rohit Kaushish

[Read full review](#) 

Senior Software Engineer at Tech Mahindra Limited

Customer Service and Support

“The customer support for Spryker Systems is very prompt. If you raise something, there are multiple incident categories, which means you need a response very quickly if it is a production issue. This is very helpful..”

AnkurPorwal

Staff Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

Other Advice

“I would recommend to others who are considering Spryker Systems that it is not for small companies. The focus should be on B2B sales. Someone who only sells T-shirts does not need the complexity of Spryker Systems..”

Verified user

Head of IT at a tech vendor with 10,001+ employees

[Read full review](#) 

“My advice for others looking into using Spryker Systems is that it depends on their requirements. If clients want to create a system that is large in scope and they want to expand their system, then Spryker is the best option for that type of client. However, it depends on the type of requirements they have. If they want to explore a system at the microservices level, then Spryker is the best option. I would rate this review a six out of ten..”

Verified user

Associate Staff Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

“These are my skills and right now these are the skills which I am working on with these products. I am currently working on [Adobe Commerce](#), specifically. I do not have experience with [Adobe ColdFusion](#). I worked on Spryker Systems around one year ago. In the last year, I have left Spryker Systems. We were working on maintenance until December. After that, I completely moved on to the [Adobe Commerce](#) project. It is a company project. Our company is providing services to the Redington company, so it is a Redington project. It is only for web. I have not

used the headless structure in Spryker Systems. For analytics features, I used a third-party tool like [Google Analytics](#) in Spryker Systems, not Spryker Systems itself, to analyze customer data and other user data. I will recommend Spryker Systems. If someone has a big product, then they can use Spryker Systems there. If they do not want to lose customers' sessions or lose their customers, then Spryker Systems is a viable option. My overall rating for this product is nine out of ten..”

Rohit Kaushish

Senior Software Engineer at Tech Mahindra Limited

[Read full review](#) 

“Day-to-day, I am working on multiple projects that I am handling, including B2B, B2C, and the marketplace. If someone goes to the website or the web app and wants to purchase something, we are creating multiple e-commerce platforms. For example, we worked with the pharmacy or medical domain. Additionally, we also have experience in the automobile domain, and I also have experience in the electronics domain.

“The main difference that Spryker Systems has made in my work is that if we have something that we need to create from scratch, there is a chance of increasing bugs. However, with a built-in feature that has been tested multiple times, there is low risk. Spryker Systems by default gives many features. For example, it has a modular architecture. If you want to extend something or if you want to inject it into Spryker Systems, it is very easy. A pretty simple format is present in Spryker Systems. From an extensive point of view or for a large project point of view, Spryker Systems is the best platform right now.

“My advice to others looking into using Spryker Systems is that if they have very big product data or they have multiple payment gateways or multiple [ERP](#) integrations, they need to think about Spryker Systems. Spryker Systems gives us very extensive support for that. There are multiple things available. You simply go and develop or create a custom module. This is the modular architecture. For that particular size, you can choose Spryker Systems. I have given this review a rating of 9 out of 10..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
